

ENSURE CONTENT CONSISTENCY, INTEGRITY, AND QUALITY

CHALLENGE

- Difficulty to keep design database synchronized with final content.
- Traceability still performed on the spot using references contained in documents, changes still propagated manually.

BENEFITS

- High quality and consistency of content
- Design data are associated with their description (content database, Word files). When a deliverable is generated, it is updated incrementally to reflect changes in design data.

SOLUTIONS

- Consistency enforced through highly-structured and navigable XML content
- Incremental updates that guarantee consistency between design database and final content.
